

Marc Gilbert R. Lim

Computer Engineer

+63 956 443 0663 | marcgilbertlim1@gmail.com | <https://imlimmy.github.io/> (Portfolio)

Computer Engineer

Detail-oriented Computer Engineer specializing in backend infrastructure architecture, data system risk mitigation, and automated workflows. Proven track record executing secure RESTful API integrations, optimizing data compliance pipelines at enterprise scale, and diagnosing layer-1/layer-2 network routing vulnerabilities. Focused on delivering high-efficiency web architectures, process optimizations, and reliable technical risk containment solutions.

Technical Skillset

Backend & Engineering: Python, Django REST Framework, PostgreSQL, Relational Database Management Systems (RDBMS), API Authorization Protocols

Frontend Development: HTML5, CSS3, JavaScript (ES6+), Responsive Web Design, DOM Architecture, UI Physics Optimization

Risk & Data Governance: Workflow Risk Analysis, Incident Escalation Frameworks, Content Mitigation Pipelines, Process Optimization, Technical Auditing

Systems & DevOps: Git Version Control, GitHub Actions, CI/CD Deployment Pipelines, GitHub Pages, CRM & Ticketing Workflows

Network & Infrastructure: Layer-1/Layer-2 Fault Diagnostics, Router/Gateway Configurations, Hardware Troubleshooting, OS Configuration

Professional Experience

Accenture | *Content Moderator / Trust & Safety New Associate* | May 2025 – Present

- **Risk Mitigation & Governance:** Execute systematic workflow risk analyses and complex platform policy interpretations to protect platform integrity and ensure structural compliance.
- **Process Optimization:** Leverage deep internal system and tool insights to identify structural bottlenecks, designing optimized content mitigation paths that improve internal operational processing agility.
- **Incident Management:** Manage high-priority digital threat containments and advanced escalation workflows under strict, time-sensitive operational SLAs.

Teleperformance (AT&T) | *Technical Support Engineer (Network Operations)* | November 2024 – April 2025

- **Network Optimization:** Diagnosed and resolved layer-1 and layer-2 network connectivity faults for AT&T Internet Air and mobile network infrastructures, guiding distributed users through performance remediation loops.
- **Hardware Deployment:** Instructed clients on local gateway deployments, bandwidth allocation tuning, and wireless hardware compatibility configurations to eliminate regional performance drops.
- **Incident Routing Architecture:** Utilized enterprise CRM software and incident tracking frameworks to isolate, document, and escalate nested firmware and hardware bugs to engineering tier-groups.
- **Strongbond Philippines Inc.** | *IT Clerk / Infrastructure Specialist* | June 2024 – November 2024
- **System Deployment:** Coordinated the provisioning, imaging, and security staging of corporate client devices, network hardware, and essential business productivity applications.
- **Data Integrity Auditing:** Monitored system activities for hardware and operational anomalies, deploying local baseline security mechanisms to safeguard corporate data storage networks.
- **Infrastructure Asset Mapping:** Created and maintained detailed hardware asset tags, license allocations, and

infrastructure tracking matrices to keep internal systems deployment-ready.

AlconPH / ITSmart | *Back-End Developer | October 2023 – March 2024*

- **API Architecture:** Engineered clean, scalable RESTful backend microservices using the **Django REST Framework** to power automated corporate Payroll System applications.
- **Database Management:** Developed secure **PostgreSQL** relational database layers, optimizing data indexing strategies to guarantee transactional accuracy and sub-second calculation speeds.
- **Backend Security Implementation:** Built robust middleware solutions featuring token-based user authentication and explicit permission matrices to guarantee isolated data reads for sensitive financials.

Technological Institute of the Philippines | *IT Security Laboratory Assistant (Internship) | March 2023 – May 2023*

- **Server Lifecycle Diagnostics:** Inspected, isolated, and resolved server hardware component issues, operational system (OS) crashes, and server-room connectivity faults to maximize environment uptime.
- **Hardware/Software Verification:** Implemented rigorous verification matrices and component benchmark testing procedures to evaluate performance stability before production server updates.

Education

Technological Institute of the Philippines - Manila

Bachelor of Science in Computer Engineering | June 2019 – September 2023

Our Lady of Perpetual Succor College

High School & Senior High School Diploma – Accountancy, Business, and Management (ABM) | June 2013 – September 2019
